NOTES:

1. DBH [Diameter Breast Height]: The trunk diameter measured at 4'-6" above ground level.
2. CRR [Critical Root Radius]: The surface area surrounding the trunk containing the roots that provide water and nutrient uptake to the tree. It is defined as tree diameter (at 4'-6" from ground) multiplied by 1.5, value to be expressed in feet.
   a. Disturbing greater than 25% of the CRR is unacceptable unless authorized by UW-Madison landscape architect.
   b. The cluster of larger roots immediately surrounding the trunk which provides tree stability (root plate) shall be protected from damage at all times
3. Cleanly hand-cut any exposed roots within the open trench using clean and sharp tool. Do not rip or tear.
